On Going Progress:

Alim Ul Karim: Now I have managed to complete the expression sequence process and trim every nonfunctional zeros, my program calculates values as a double but represents them in a user-friendly format as shown below.

```
"E:\Working\NSU Classes\CSE\115\Project For Course\Equation_Solver\main.exe"

-----
CSE 115.2 Project By
Alim Ul Karim and
Alvee Ibne Rahman
-----

Project Name : Math Expression Solver
-----

input your equation:
2^3+3+2*2/5

Standard Format of Your Equation:
2^3+3+2*2/5
= 8+3+2*2/5
= 8+3+2*0.4
= 8+3+0.8
= 11.8
```

My expression solver can solve any simple expression but brackets are not done yet; after that the project will be done.

Alvee Rahman : Communication gap.
